Design Inspection / Code Review #2

Team GymWorkout

Harsha Lingareddy, Manoj Polisetti, Dhiman Swadia, Sanat Mouli, Vishaal Bommena

Design Inspection Defects

Product	GymWorkout Profile design inspection	
Date	10/12/2017	
Author	Vishaal Bommena	
Moderator	Dhiman Swadia	
Inspector	Manoj Polisetti	

Defect #	Description	Severity	How it was corrected
1	As you enter information into the search bar the tableview is not indexed correctly, which causes redirection to an incorrect cell	1	Updating the index of the table view whenever the search bar is activated
2	Data was being pulled into the database, but it was too long.	1	Had to truncate the strings to specific size to fit them properly in the table view

(3	Loading and	1	Batching of the queries, whenever the user scrolls
		populating the tableview was slow		

Product	GymWorkouts workout list design inspection	
Date	09/22/2017

Moderator	Dhiman Swadia	
Inspector	Sanat Mouli	

Defect #	Description	Severity	How it was corrected
1	No way to show the muscle group related to a workout created for a specific muscle group	2	Put the Name of the muscle group as the name of the created list
2	Searching through all workout lists based on muscle group	1	Made sure it only displays lists catered towards the specific muscle group without results from normal workouts
3	Changed the view controller to update the number of reps immediately	2	Changed the view controller to update the number of reps should happen once the user press's the submit button

Product	GymWorkouts reminders and achievements design inspection	
Date	09/22/2017	
Author	Manoj Polisetti	
Moderator	Vishaal Bommena	
Inspector	Harsha Lingareddy	

Defect #	Description	Severity	How it was corrected
1	If the query entered does not match to a valid key value pair in the database	1	Visual code inspection for each query are set in place for each variable in the server which receives values from the database.
2	If there are too many calls to the database for inserting and fetching data.	1	Batching of queries to send many queries at one Post request to the server. The server then unloads the queries and executes each query one at a time, to control the flow of data being stored and fetched.
3	Objects can be malformed if the name of the workout is queried under the name.	1	The query on the client must be re-written and inspected. This will be done to ensure integrity of the database.

Code Inspection

Product	Gym Workouts Profile Code Inspection	
Date	10/11/2017	
Author	Dhiman Swadia	
Moderator	Manoj Polisetti	
Inspector	Sanat Mouli	

Defect #	Description	Severity	How it was corrected
1	Invalid characters in edit name field in the user profile page.	1	Perform validation checks and thoroughly check that all names have only letters and no symbols
2	Profile viewcontroller crashes due to the data being absent due to the query not being completed	1	Finish the query before rendering the view.
3	Clicking on the profile button doesn't take you to the profile page.		Create unique storyboard identifier for each storyboard, to avoid conflict in the future.

Defect #	Description	Severity	How it was corrected
1	If name is too long it's truncated when sent to the database	1	Fixed the call by limiting the name size to specific size.
2	Optimized the database in order to easily find workouts pertaining to a certain muscle groups	2	Fixed the time it takes to search for workouts of certain muscle groups by querying the muscle group for each workout.
3	Optimized the fetch for preset workout lists by creating individual objects for each workout	2	Created individual objects for each workout in order to optimize the fetch on the front-end.

Defect #	Description	Severity	How it was corrected
1	Different view controllers were causing conflicts when changes were made to settings	1	Reduced the number of view controllers to make lower merge conflicts
2	The settings bar was overlaying on the main navigation bar	1	Created a segway that puts the edit button under the navigation bar
3	The views had to be added to the universal segway controller	2	Connecting the profile view to a universal one so the changes are viewed immediately

Inspector	Sanat Mouli	

Defect #	Description	Severity	How it was corrected
1	The structure of the database wasn't configured to handle different workouts focussed on a single muscle group	1	Changed the structure to change dynamically as workouts are added with the same muscle group and a key keeping track of the associated muscle group
2	The structure of the database wasn't configured to allow the user to write to the database	2	Changed the rules of the database to allow for users to write to certain lists.
3	Names with infinite length	2	Made sure the name truncated before being sent to the database

Unit Testing

Product	GymWorkout Login Verification Unit Testing Inspection
Date	09/22/2017
Author	Vishaal Bommena
Moderator	Sanat Mouli
Inspector	Harsha Lingareddy

Defect #	Description	Severity	How it was corrected
1	Handle invalid requests and null cases	1	Add implementation to handle invalid requests on the client side
2	Checking if credentials entered exist for the login system	2	Return a failure response and add the appropriate handler for cases when they do not exist

Product	GymWorkouts Login Page Unit Testing Inspection
